Definition Internal combustion engine definition is - a heat engine in which the combustion that generates the heat takes place inside the engine proper instead of in a furnace. Internal Combustion Engine | Definition of Internal ... An internal combustion engine (ICE) is a heat engine in which the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the

engine. Internal combustion engine - Wikipedia Internal-combustion engine, any of a group of devices in which the reactants of combustion (oxidizer and fuel) and the products of combustion serve as the working fluids of the engine. Such an engine gains its energy from heat released during the combustion of the nonreacted working fluids, the oxidizer-fuel mixture. internal-combustion engine | Definition & Facts | Britannica An internal combustion engine is an engine that creates its energy by burning fuel inside itself.
